

NAME:	AYOSHINA JAGUN
STUDENT ID:	2016932
COURSE MODULE:	CMM007 - Intranet Systems Development
PROJECT TOPIC:	STORYTELLING APPLICATION

INTRODUCTION

▪ Application Description:

Storytelling app can be defined as an incredible way for an individual/user to develop an understanding, respect and gratitude for other cultures, and can encourage a positive approach to people from different aspects of life. It can also be described as a way of enhancing intercultural informations and understanding or communicating through various means either by location or by categories. I got interested in this application because I personally love storytelling or I try to familiarize myself or get to know what is going on around me, which is what got me attracted in wanting to build and design this web application. This system application helps users to upload or publish different kind of stories in various aspects or categories in life/nature and it also helps them to read or view interesting stories that are already being posted by other users that are making use of the web application. For example: sports, health nutrition, animals, technologies etc.

I was able to build this application in a 3 weeks timeline. I included major functionalities that have to do with the 3 major users, which are:

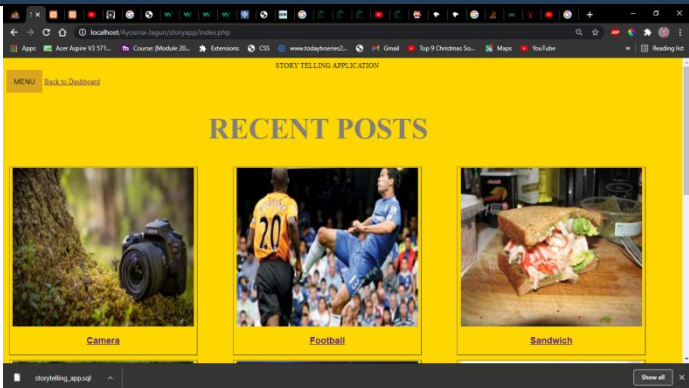

- **Story seekers:** The functionality I was able to create for story seekers is that they will have free access to view any story of their choice and they will also be able to comment underneath the specific story that was chosen by them to view.
- **Storytellers:** I was able to create a dashboard for the storytellers in the application which their major function was to upload/post any story they want alongside an inclusive image. They will also be able to edit any of their stories in case an error was made after uploading but all these can only be done when the storytellers are still logged in.
- **Administrators:** The admin functions are simply just the reviewing and managing of stories in the application.

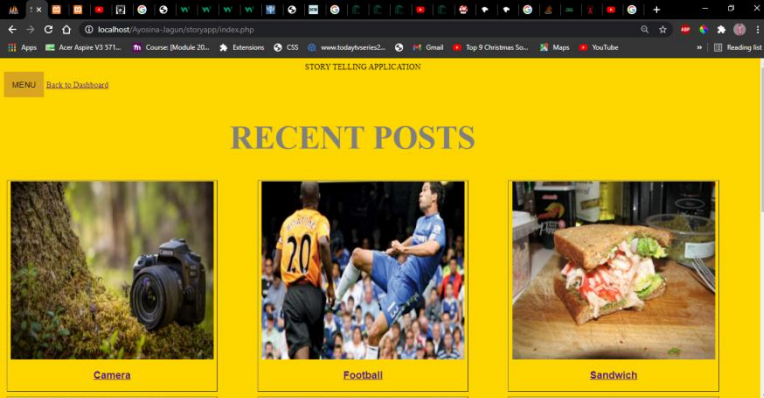

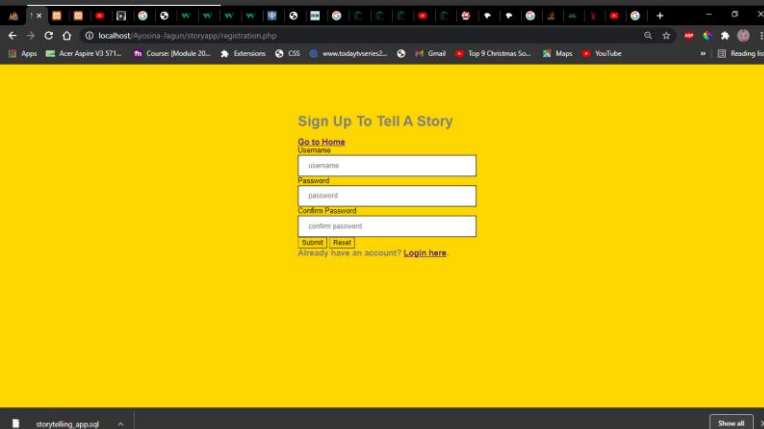

▪ **Statement Of Compliance:**

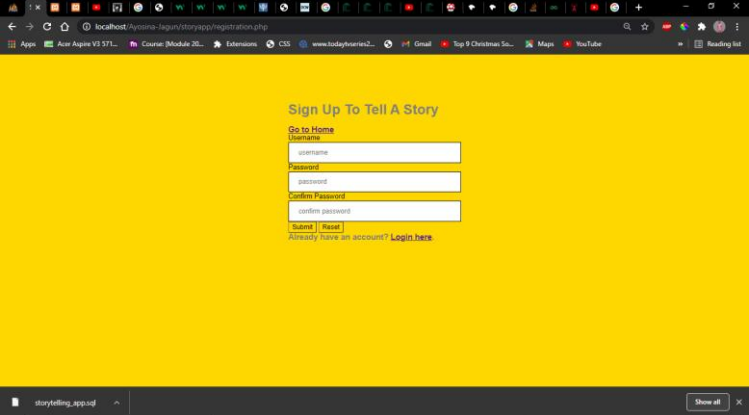

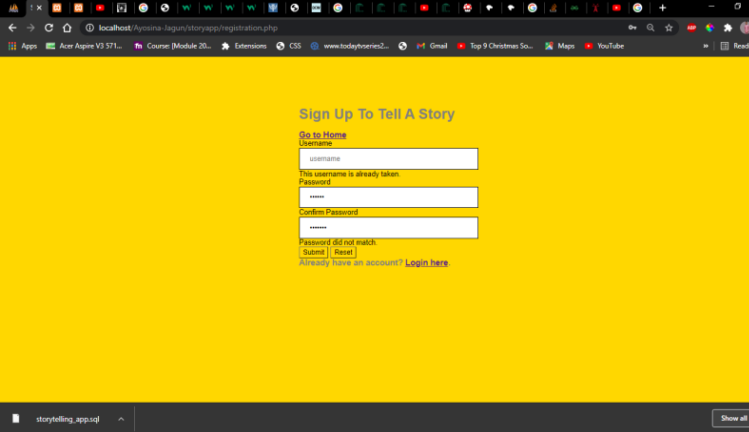

S/N	Implemented Requirements	S/N	Requirements not Implemented
1	A Story seeker has access to the homepage through a personalized link made for all users.	1	No like or dislike function implemented as stated in the previous report.
2	Story seekers can view all posts or stories on the main page of the application.	2	The Story seeker wasn't able to share posts because it wasn't implemented in the application as mentioned in the previous report.
3	Story seekers can click the stories on the main page in order to view all the full contents of the stories.		
4	Story seekers can express their comments underneath the contents of the stories.		
5	A Story teller has access to the page homepage through a personalized link made for all users.		
6	Story tellers can register and login directly to their dashboards from the dropdown session on the main page.		
7	Story tellers can now post/upload stories alongside the images from their various dashboards.		
8	A Story teller has the freedom to edit a story and an image post that has been posted already from his/her dashboards.		
9	Story tellers can delete an image and a story post, if it doesn't look presentable.		
10	Story tellers can logout of their dashboard, once they have no more use for it.		
11	Story tellers can view all their stories alongside with other users when logged out from their dashboard.		
12	Administrator has access to the homepage through a personalized link made for all users.		
13	Administrator can login with his/her login details.		

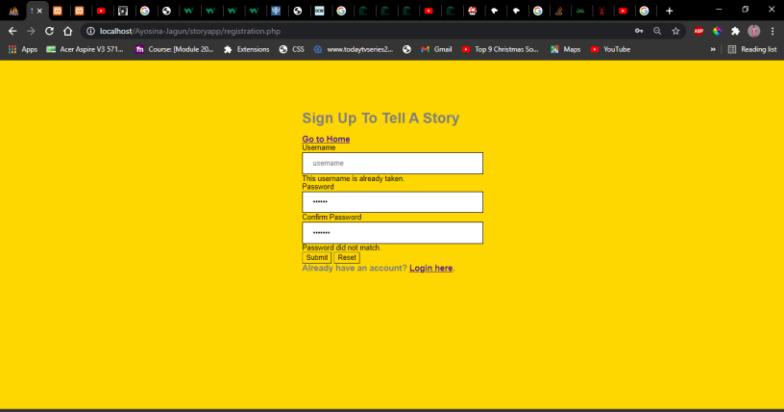

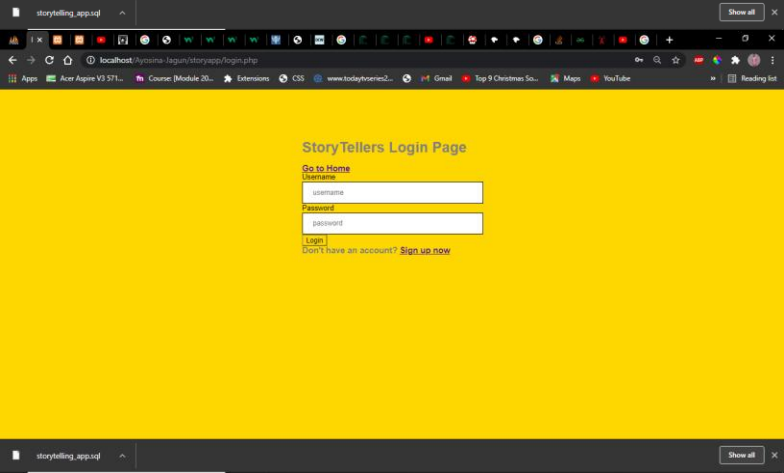

14	Administrator has access to their dashboards after logging in, in order to approve stories from the story teller.		
15	Administrator can also review all stories and users, in case he/she wants to delete from the application.		

▪ Test plan and results completed for the application :

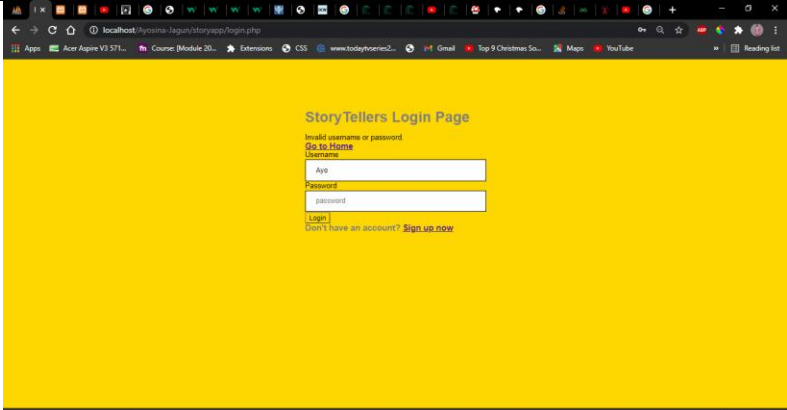

S/N	Evidence Output	Purpose of the Test	Expected Output	Actual Output
1		Users attempts to access to the homepage	The application should allow all users to have access to the homepage	The application allows all users to have access to the homepage
2		Story seekers attempts to view a story content	The application should allow “story seekers” to view a content	The application allows “story seekers” to view a content
3		Story seekers attempts to type in the comment box	The application should allow “story seekers” to type in the comment box	The application allows “story seekers” to type in the comment box

4		Story seekers attempts to submit comment	The application should allow “story seekers” to submit comment	The application allows “story seekers” to submit comment
5		Storyteller attempts to access the signup page through the dropdown session on the main page	The application should allow “storyteller” to access the signup page through the dropdown session on the main page	The application allows “storyteller” to access the signup page through the dropdown session on the main page
6		Storyteller attempts to register with correct details in the signup page	The application should allow account to be created	The application allows account creation

7	 <p>The screenshot shows a web browser window with the URL 'localhost/kyosima-jagun/storyapp/registration.php'. The page has a yellow background and the title 'Sign Up To Tell A Story'. Below the title is a link 'Go to Home Overview'. The form contains four input fields: 'Username', 'Password', 'Confirm Password', and 'confirm password'. At the bottom of the form are 'Submit' and 'Reset' buttons, and a link 'Already have an account? Login here'.</p>	<p>Storyteller attempts to register with incorrect details or empty fields</p>	<p>The application should refuse the request</p>	<p>The application refuses the request</p>
8	 <p>The screenshot shows the same web browser window as in row 7. The form fields are filled with 'username', 'password', and 'confirm password'. An error message 'This username is already taken' is displayed below the 'Username' field. The 'Password' and 'Confirm Password' fields are empty. The 'Submit' and 'Reset' buttons and the 'Login here' link are still visible at the bottom.</p>	<p>Storyteller attempts to register with a “confirm password” that differs</p>	<p>The application should refuse the request</p>	<p>The application refuses the request</p>

9		Storyteller attempts to register with an existing username	The application should refuse the request	The application refuses the request
10		Storyteller attempts to Login with correct details	The application should allow “storyteller” to login	The application allows “storyteller” to login

11

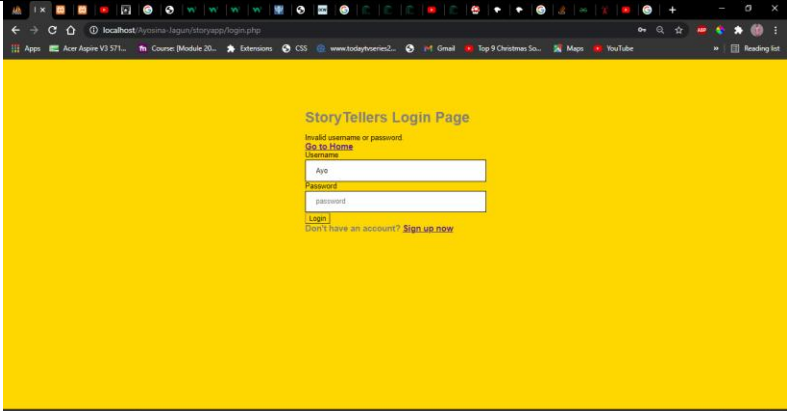

Storyteller attempts to login with empty fields

The application should prevent the “storyteller” from logging in

The application prevents the “storyteller” from logging in

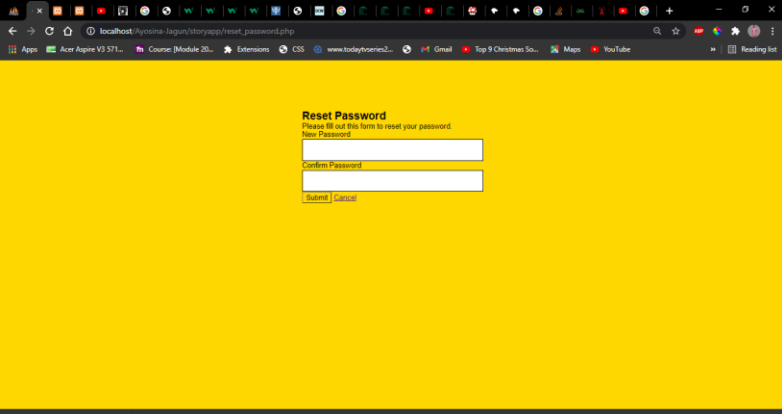

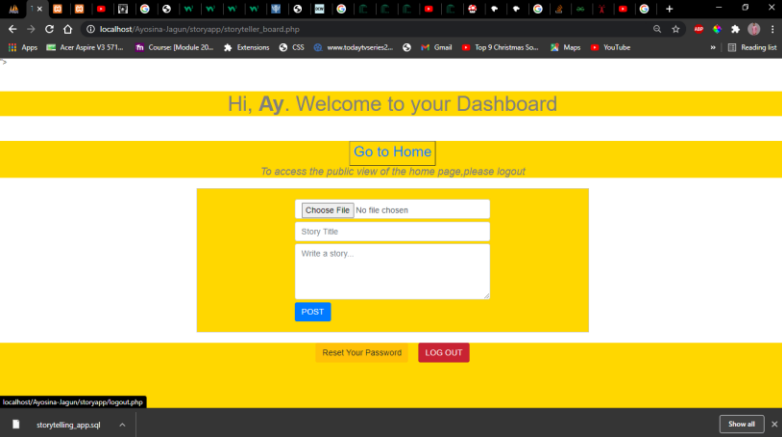

12

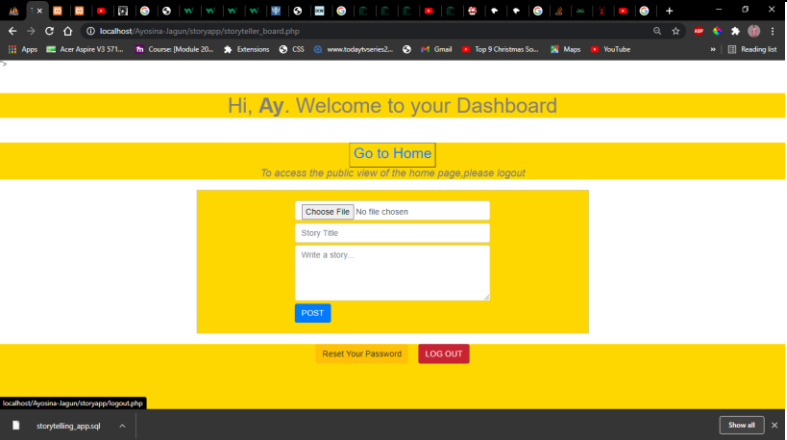

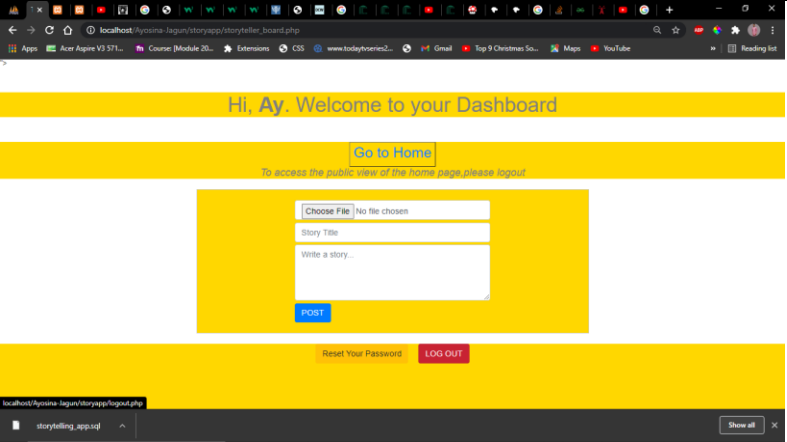

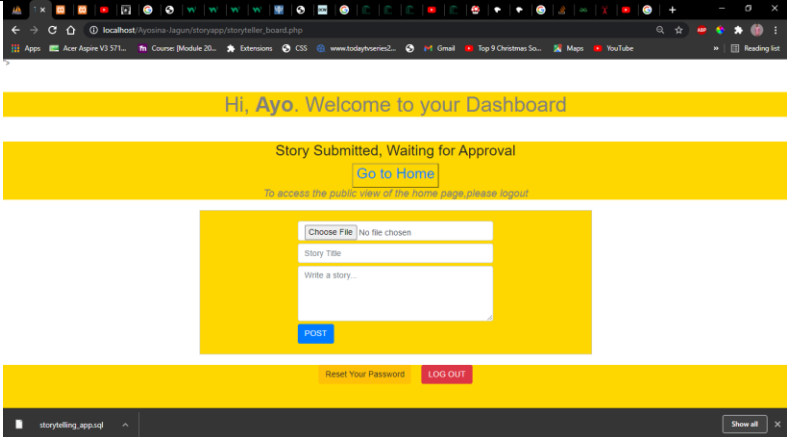

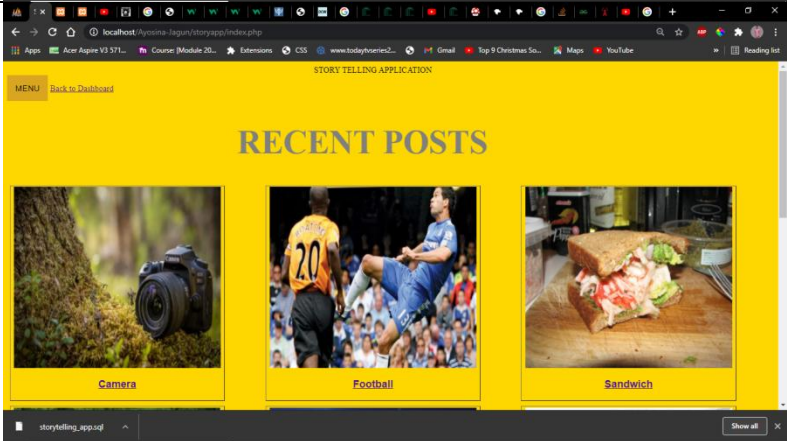

Storyteller attempts to login with incorrect details

The application should prevent the “storyteller” from logging in

The application prevents the “storyteller” from logging in

13		Storyteller attempts to reset password	The application should allow the “storyteller” to reset their password	The application allows the “storyteller” to reset their password
14		Storyteller attempts to type a story in the dashboard with texts	The application should allow typing of stories in the dashboard with texts	The application allows typing of stories in the dashboard with texts

15		Storyteller attempts to upload an image in the dashboard	The application should allow uploading of an image in the dashboard	The application allows uploading of an image in the dashboard
16		Storyteller attempts to post a story	The application should allow posting of stories	The application allows posting of stories
17		Storyteller attempts to edit a posted story with the image	The application should allow the editing of a posted story with the image	The application allows the editing of a posted story with the image
18		Storyteller attempts to delete an existing story	The application should allow the "storyteller" to delete an existing story with the image	The application allows the "storyteller" to

		with the image		delete an existing story with the image
19		Storyteller attempts to logout from the software	The application should allow the “storyteller” to logout from the software	The application allows the “storyteller” to logout from the software
20		Storyteller attempts to view other users posts when logged out	The application should allow the “storyteller” to view other users post when logged out	The application allows the “storyteller” to view other users post when logged out
21		Administrator attempts to login with empty fields	The application should prevent the “administrator” from logging in	The application prevents the “administrator” from logging in
22		Administrator	The application should prevent the	The application

		attempts to login with incorrect details	“administrator” from logging in	prevents the “administrator” from logging in
23		Administrator attempts to Login with correct details	The application should allow the “administrator” to login	The application allows the “administrator” to login
24		Administrator attempts to access their dashboard after logging in	The application should allow the “administrator” to access their dashboard	The application allows the “administrator” to access their dashboard
25		Administrator attempts to approve stories from the storyteller	The application should allow the “administrator” to approve stories from the storyteller	The application allows the “administrator” to approve stories from the storyteller
26		Administrator attempts to review and manage all stories and users	The application should allow the “administrator” to review and manage both stories and users	The application allows the “administrator” to review and manage both stories and users
27		Administrator attempts to edit and delete stories as storytellers	The application should allow the “administrator” to edit and delete stories as storytellers	The application allows the “administrator” to edit and

				delete stories as storytellers
28		Administrator attempts to logout from the software	The application should allow the "administrator" to logout from the software	The application allows the "administrator" to logout from the software

"Storytellers" have access to sign up before logging in while "Administrator" has access to only login. Meanwhile, Story seekers don't have a login function because they are basically just the viewers of the software. Below are the "two users" that require logging in to the system:

ADMINISTRATOR

Username: Admin

Password: Admin 123

STORY TELLER

Username1: Ay

Password: ayosina

Username 2: Sam

Password: sam123

GITHUB REPOSITORY: www.github.com/2016932/Ayosina-Jagun
